iX Data Bridge Consumers
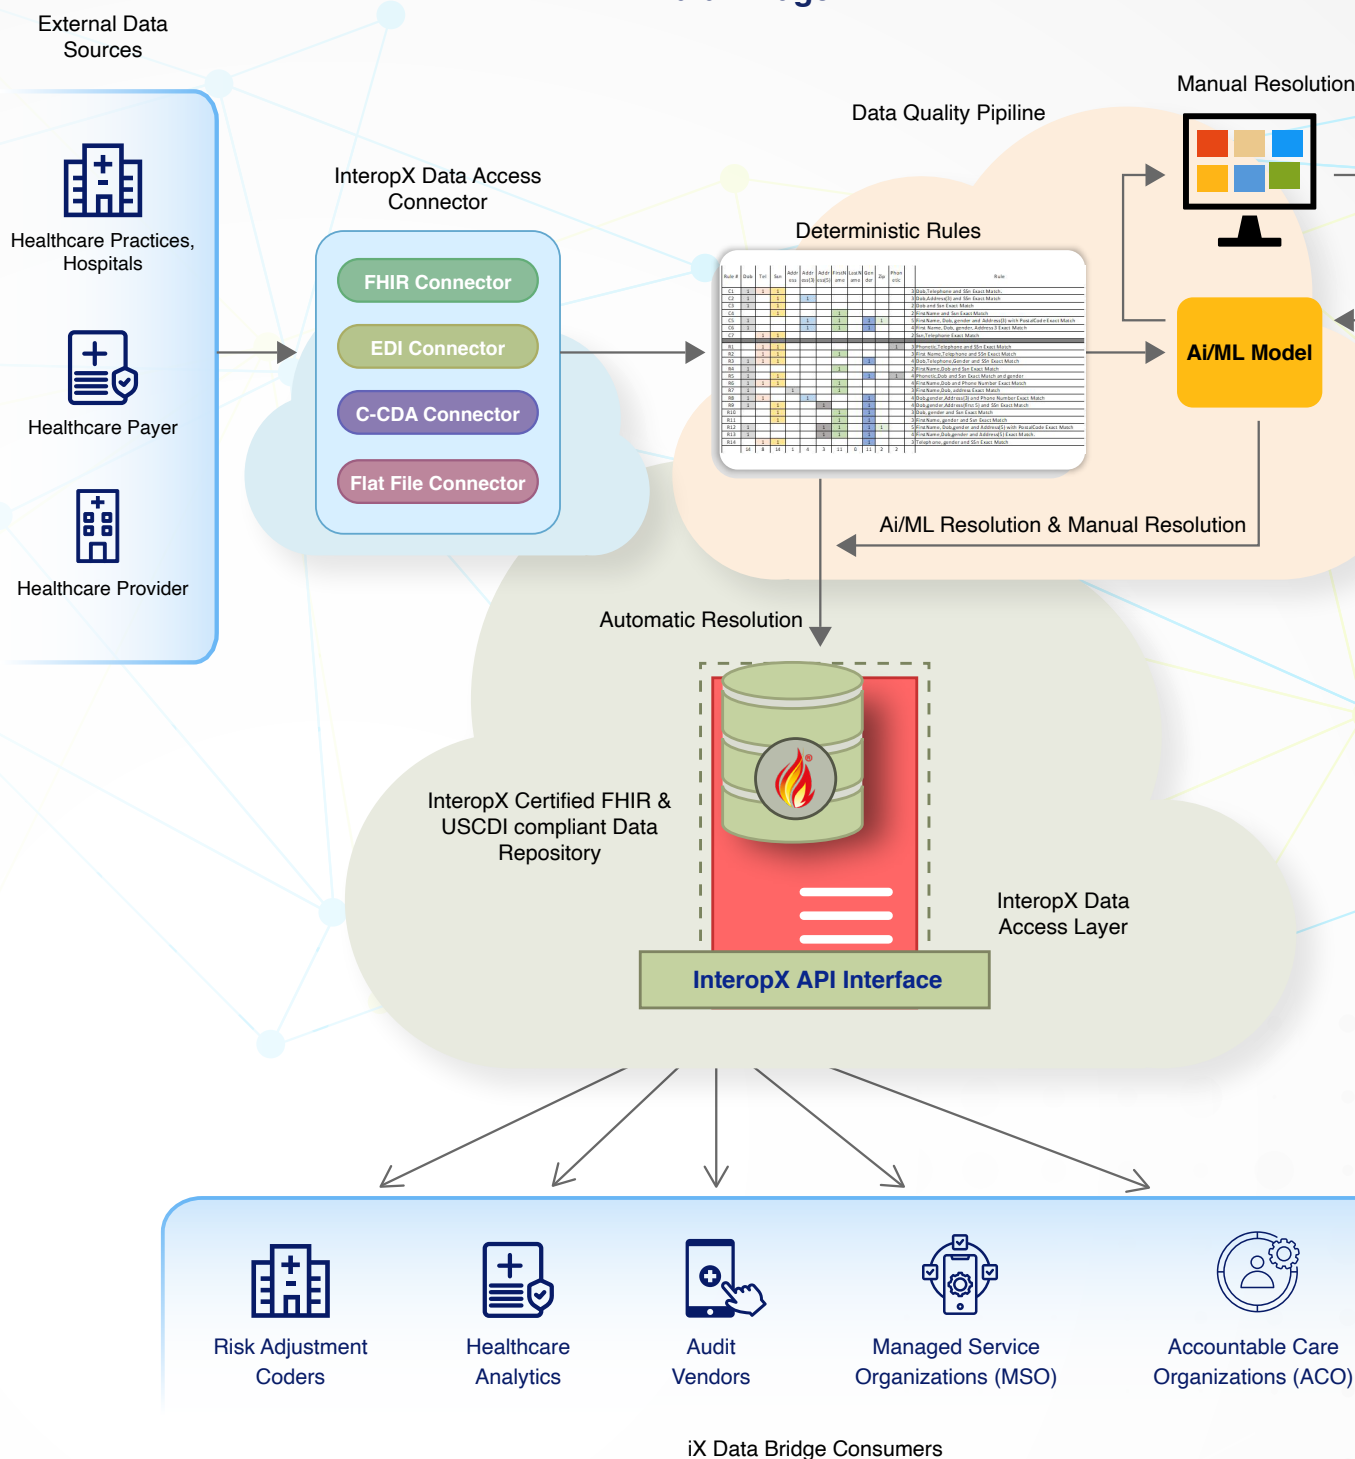

> **Flexible Connector architecture**
> Remote Monitoring, Data Quality, health checks

> **Flexible RESTful APIs to integrate 3rd party apps**

> **Microservices architecture**
> Any component can be integrated incustomer's environment

> **Certified for CMS Patient Access Rule and ONCCures Act**

> **Cloud or on-prem deployment**

Direct Patient Data Access Solution Workflow

InteropX's iX Data Bridge integration can be done with any EHR/EMR and Payer Systems to access, analyse and process patient data

InteropX

21st Century Healthcare Data Access Platform

Meet Rachel,

She is an Audit vendor and does lots of risk adjustment coding and analytics

Rachel wants to retrieve, view and curate healthcare data before using for coding analysis
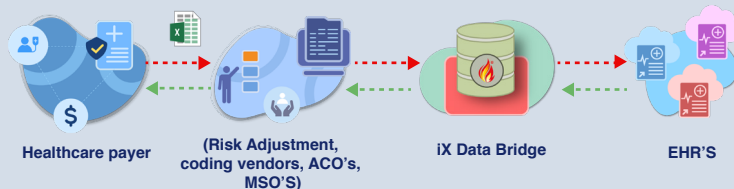

Rachel has two challenges: She is not a healthcare data analyst and finds the current chart retrieval manual processes cumbersome. She is looking for an efficient way to access patient data.

HIMSS

Rachel met us at HIMSS and we solved both her challenges. **She is one of our happiest clients.**

InteropX

21st Century Healthcare Data Access Platform

Automated InteropX solution

Healthcare payer → (Risk Adjustment, coding vendors, ACO's, MSO'S) → iX Data Bridge → EHR'S

- Vendor partner provides chase list for collection by provider and member
- The chase list is uploaded into InteropX.
- InteropX is configured to integrate with provider location and initiates data pull
- Vendor will then receive the records from InteropX.
- Vendor uses their technology tool set to surface key words for coding
